

CONTENTS

Part 1 Algebra and functions 1

Simplifying rational expressions	1
Functions and mappings	5
Inverse functions	8
The modulus function	14
Transformations of graphs	18
Review exercise 1	23
Examination exercise 1	28

Part 2 Trigonometry

Secant, cosecant and cotangent	33
Inverse trigonometric functions	37
Compound angles ($A \pm B$)	39
Double angle formulae	43
The form $a \cos \theta + b \sin \theta$	47
Review exercise 2	51
Examination exercise 2	53

Part 3 Exponentials and logarithms

e^x and $\ln x$	57
Solving equations with exponential and logarithmic functions	61
Review exercise 3	64
Examination exercise 3	65

Part 4 Differentiation 1

Function of a function	68
Product rule	70
Quotient rule	73
Differentiating e^x	76
Differentiating $\ln x$	80
Differentiating $\sin x$, $\cos x$, $\tan x$	84
Differentiating $\operatorname{cosec} x$, $\cot x$, $\sec x$	89
Further questions	90
Review exercise 4	94
Examination exercise 4	98

Part 5 Numerical methods

Finding solutions to equations	103
Iteration	105
Review exercise 5	108
Examination exercise 5	110

Part 6 Partial fractions

Partial fractions	114
'Cover up' rule	116
Repeated factor	118
Improper fractions	120
Examination exercise 6	123

Part 7 Parametric equations

Parametric and cartesian form	126
Parametric differentiation	128
The area under a curve	131
Volume of revolution	132
Review exercise 7	134
Examination exercise 7	135

Part 8 The binomial series

The binomial series	138
Partial fractions and harder questions	142
Review exercise 8	145
Examination exercise 8	145

Part 9 Differentiation 2

Implicit functions	149
Exponential growth and decay	153
Differentiating a^x	154
Connected rates of change	158
Review exercise 9	161
Examination exercise 9	164
