Part 5 Dynamics of a particle moving in a straight line	
5.1 Force and Newton’s laws of motion	87
5.2 Applications of Newton’s second law	90
5.2.1 Horizontal and vertical motion	90
5.2.2 Horizontal motion with friction	92
5.2.3 Motion on an inclined plane	98
5.2.4 Connected particles	104
5.2.5 Connected particles over pulleys	111
5.2.6 Connected particles over a pulley on an inclined plane	119
5.2.7 Application of vectors	128
Examination Exercise 5	130
Part 6 Momentum and impulse	
6.1 Momentum and impulse	136
6.2 Change in momentum	136
6.3 Impulse	137
6.4 Conservation of momentum	140
6.5 Conservation of momentum for bodies colliding	140
6.6 Conservation of momentum for bodies separating	144
6.7 Jerk in a string	145
6.8 Momentum and impulse in vector form	147
6.9 Further momentum and impulse questions	148
Examination Exercise 6	153
Part 7 Moments	
7.1 The moment of a force	156
7.2 Sum of the moments of more than one force	156
7.3 Uniform and non-uniform bodies	159
7.4 Equilibrium of parallel forces acting on a body	160
7.5 Tilting	165
7.5.1 Overlapping plank	165
7.5.2 Plank on two supports	165
7.6 Non-uniform rods	168
Examination Exercise 7	171
Part 8 Applications of vectors to mechanics	
8.1 Addition of vectors	175
8.2 The displacement vector	175
8.3 Relative displacement	176
8.4 The velocity vector	177
8.5 The acceleration vector	177
8.6 Constant velocity	178
8.7 Least distance between two particles	179
8.8 Collision of two particles	180
Examination Exercise 8	186
Specimen M1 papers	190
